

Nevada Election Data Guide

Last updated: October 6, 2026

Nevada publishes statewide election data through the [Secretary of State's Elections Division](#); these data include official results back to 1962, precinct-level results and cast vote records for recent elections, monthly voter-registration snapshots, and the statewide voter file. The state provides precinct-level results, and for the 2026 cycle it centralizes each county's cast vote records on a single page. Note that the statewide files do not carry vote-mode breakdown. Nevada has mailed a ballot to every active registered voter since 2020, but the statewide precinct file reports only a single total per candidate per precinct. Clark and Washoe, the two counties with roughly 88% of the state's voters, fill that gap by publishing results split by Election Day, early, and mail voting, along with voter-level mail, turnout, and signature-cure files. Those two counties have their own sections below.

Two constraints to access shape the statewide data. The [Secretary of State's site](#) sits behind a security service that blocks automated download tools, so its files usually have to be pulled through a web browser rather than a script. The full voter file is obtained by request.

The datasets described in this guide are as follows:

Statewide

Election Results

Description

Official canvassed results by contest for federal, state, and statewide races, 1962 to present. Each election appears as a statewide summary plus one page per county, with candidate vote totals for every contest. Municipal, special, and recount contests are listed separately by year on the index page. The election-night reporting site carries unofficial returns as they come in; the results portal carries the certified counts.

Dedicated webpage

Index, 1962 to present: <https://www.nvsos.gov/sos/elections/election-information/previous-elections/election-results>

Statewide summary (2024 general):

<https://www.nvsos.gov/SOSelectionPages/results/2024StateWideGeneral/ElectionSummary.aspx>

Single county example (2024 general, Clark):

<https://www.nvsos.gov/SOSelectionPages/results/2024StateWideGeneral/Clark.aspx>

Election-night reporting site: <https://silverstateelection.nv.gov/>

Variables

Each contest is a table of candidates with:

- + Candidate
- + Party [DEM Democratic, REP Republican, LPN Libertarian Party of Nevada, IAP Independent American Party, and other qualified parties]
- + % of Vote
- + Total Votes

Notes for use

- + Results are HTML tables with no download option. The county pages provide county-level totals, and the summary page gives statewide totals. Precinct detail lives in the separate [Precinct-Level Results](#) dataset below.

Precinct-Level Results

Description

Precinct-level vote totals for every contest in statewide primary and general elections, downloadable per election as Excel or CSV files. Coverage runs from the 2004 general election to the present, including each regular primary and general, the 2024 presidential preference primary, and a 2011 special election. Each row is one candidate's vote count in one precinct for one race, so a single file is long rather than wide. A companion query tool returns the same data for a single race, county, or candidate by precinct.

Dedicated webpage

Downloads by election: <https://www.nvsos.gov/sos/elections/election-information/precinct-level-results>

Query tool: <https://www.nvsos.gov/electionresults/>

Each election on the downloads page links to an Excel and a CSV file. The links are opaque document IDs rather than constructable URLs, so start from the index.

Variables

- + Jurisdiction [county name, or Carson City]
- + Precinct
- + Race [carries the party for primary contests, e.g. "United States President (Democratic)"]
- + Candidate
- + Votes

Notes for use

- + Precinct sums may not match county totals: when a precinct's total for a race or ballot question is greater than zero but under ten, the count is replaced with an asterisk to protect ballot secrecy.
- + To map precincts to legislative or congressional districts, join on the precinct crosswalk below. Note that the 2020 primary file is missing Carson City.

Precinct-to-District Crosswalk

Description

A spreadsheet mapping every registered precinct to its county and its congressional, state senate, and state assembly districts. The current file is dated as of February 29, 2024. It is the key that turns the precinct results and cast vote records into district-level data.

Dedicated webpage

Linked at the foot of the Precinct-Level Results page

(<https://www.nvsos.gov/sos/elections/election-information/precinct-level-results>) as "Statewide Precincts as of 2/29/24"; the file is named "Precincts by County, Senate, Assembly and Congressional District.xlsx".

Variables

- + County Code
- + Countyname
- + Registered Precinct [precinct number, e.g., 101.1; match on the Precinct field in the precinct results]
- + Congressional District
- + Senate District
- + Assembly District

Notes for use

- + Education and Board of Regents districts are not included in this file.

Cast Vote Records

Description

Ballot-level cast vote records with one file per jurisdiction. For the 2026 cycle, the Secretary of State centralizes the records for all 17 jurisdictions (the 16 counties plus Carson City) on a single page. Each row is one ballot, showing the selection made in every contest on that ballot in addition to how and where it was cast. For elections before 2026, cast vote records come from the individual counties; Washoe publishes its own back to the 2020 general, with the 2024 primary missing.

Dedicated webpage

2026 records: <https://www.nvsos.gov/elections/election-information/2026-election-information/2026-cast-vote-records>

Each jurisdiction is a separate download on that page. The page lives under the cycle's election-information section, so the path changes by year.

Variables

Dominion counties (15 jurisdictions)

- + CvrNumber [sequential ballot number within the file]
- + TabulatorNum [numeric ID of the tabulator (ballot scanner) that read the ballot; Washoe's 2026 primary used 91 tabulators]
- + BatchId [scanner batch number; restarts within each tabulator, so TabulatorNum, BatchId, and RecordId together locate one physical sheet]
- + RecordId [ballot's sequence number within its scanner batch; restarts at 1 each batch]
- + ImprintedId [identifier the scanner prints on the physical ballot when imprinting is enabled, linking the record to the paper]
- + CountingGroup [vote mode, one of: Mail, Early Vote, Election Day, Prov-Election Day, Prov-Early Vote]
- + PrecinctPortion [precinct-portion code, e.g. "01.00 (06000100)"]
- + BallotType [ballot style, the set of contests printed on that ballot; written as "id (id)", e.g. "459719456 (459719456)"]

ES&S counties (Carson City, Lander)

- + Election ID
- + Audit Number [per-ballot identifier assigned at scanning]
- + Tabulator CVR [a second tabulator-assigned identifier; equals Audit Number on about six in ten rows but not all, so treat them as separate fields]
- + Cast Vote Record [sequential record number, unique within the file]
- + Batch [scanner and location, e.g. "A0108-Courthouse - 2"]
- + Ballot Status [e.g. Not Reviewed]
- + Precinct
- + Ballot Style [party plus precinct on a partisan primary, e.g. "DEM 103"]

Notes for use

- + Fifteen jurisdictions export from Dominion equipment; Carson City and Lander use ES&S, whose file has no per-candidate columns at all and records the selection as text. One parser will not read both. Within the Dominion group the metadata block is either 8 or 16 columns wide; the wider version adds ImagePath, SessionType, VoterFlag, Modified, CardInfo, PdfName, UniqueVotingIdentifier, and VotingSessionIdentifier. Washoe's own site posts an 8-column export of the same election the Secretary of State posts at 16, so check the header rather than the county.
- + In the fifteen Dominion jurisdictions, CountingGroup gives a mail, early voting, and Election Day split at the ballot level. The ES&S files carry no vote-mode field: some Carson City and Lander batch names end in EV or ED, but most batches are unlabeled, so the split does not extend statewide. The totals do not reconcile exactly to the certified canvass, and the records carry no voter identity.

Voter Registration Statistics

Description

Monthly snapshots of registered voter counts, compiled on the first business day of each month from the statewide database (since December 2006; earlier figures were supplied

by county clerks). Five report families are published, each in Active, Inactive, and Total versions with a machine-readable Excel: by county and party, by age and party, by congressional district, by state senate district, and by state assembly district. Monthly files run from 2000 to the present, with additional historical summaries back to 1950.

Dedicated webpage

Index: <https://www.nvsos.gov/sos/elections/voters/voter-registration-statistics>

By year, e.g. 2026: <https://www.nvsos.gov/elections/voters/voter-registration-statistics/2026-statistics>

Variables

The county-and-party Excel carries one row per jurisdiction with columns:

- + County Name
- + Democratic
- + Republican
- + Independent American Party
- + Libertarian
- + Non-partisan
- + Other
- + Total

The age-and-party and district reports use the same party columns, with an age group or a district number in the first column in place of County Name.

Notes for use

- + Active and Inactive are statutory statuses (NRS [293.017](#) and [293.530](#)); Inactive voters keep the right to vote, and Total is Active plus Inactive.
- + The snapshots lag behind the county databases slightly because registration transfers are not real-time, so a monthly figure will not match a county's same-day count exactly.

Statewide Voter Registration List

Description

The full statewide voter file, drawn from NevVoter, the state's voter-registration system. It is a public record but is obtained by request rather than download: the requester creates an account in the Secretary of State's online-services portal and files a signed Official Request for List of Registered Voters form. Reports are built from a menu of fields, and a voter-participation history is available as a second, matched file. Fees apply per the state pricing guide.

Dedicated webpage

Request process and field list: <https://www.nvsos.gov/sos/elections/voters/nevvoter-statewide-list>

Field documentation: "Statewide Voter Registration List – Available Fields" (Secretary of State document 5029)

Pricing: <https://nvsos.gov/SOSServices/AnonymousAccess/PricingGuide.aspx>

Variables

The registration record can include:

- + VoterID [random number, unique across the statewide list]
- + County
- + First Name
- + Middle Name
- + Last Name
- + Suffix
- + Birth Date
- + Registration Date
- + Address 1
- + Address 2
- + City
- + State
- + Zip

- + Phone
- + Party
- + Congressional District
- + Senate District
- + Assembly District
- + Education District
- + Regent District
- + Registered Precinct
- + County Status [Active; Inactive; or P-17, a 17-year-old preregistrant under NRS 293.4855 who becomes a registered voter on their 18th birthday]
- + County Voter ID [the county's own identifier; unique only within that county]
- + ID Required [Y or N, per NAC [293.395](#)]

Notes for use

- + Access requires an account, a signed request form, and a fee. Turnaround can take from the next business day up to about seven business days. The field list above is the published layout; because obtaining the file requires an account and payment, the actual values and formats were not confirmed against a delivered file.
- + P-17 records are preregistrants who are not yet eligible to vote. A 17-year-old who will turn 18 by Election Day registers normally and appears as Active. Canceled and void records are excluded from the list.

Clark County

Clark County (which includes Las Vegas) has roughly 73% of Nevada's active voters and runs elections through the [Clark County Election Department](#). Its reports include the vote-mode results split and the voter-level operational files the state does not centralize. Most datasets below are reached from the department's [reports, data, and maps page](#).

Statement of Vote

Description

Official results for each contest broken down by precinct and, within each precinct, by vote method, as one file per contest. Every precinct appears as four rows: a Totals row and one each for Election Day, Early Vote, and Mail, with per-candidate votes, registration, and turnout. Coverage runs from the 2016 general election to the present. This is the precinct-by-mode results split the statewide precinct file does not provide.

Dedicated webpage

Results portal (select an election, then "Statement of Vote"):

<https://elections.clarkcountynv.gov/electionresultsTV/results.aspx>

Example (2024 general, President):

<https://elections.clarkcountynv.gov/electionresultsTV/SOV/24G/PRESIDENT.txt>

Files are static text (quoted CSV) with a matching PDF per contest.

Variables

- + Precinct
- + Tally Type [Totals, Election Day, Early Vote, or Mail]
- + Registration
- + Turnout
- + Total Votes
- + One column per candidate, headed "Last, First" with no party, e.g. "Trump, Donald J."
- + None of These Candidates

Notes for use

- + Each precinct is four rows; filter on Tally Type to separate the mode rows from the Totals row. The file ends with a countywide vote mode summary block in a different layout.
- + Small cells are masked with an asterisk.

- + Candidate columns carry no party, and contest filenames differ across years, so paths cannot be guessed from one election to the next.

Early Voting Turnout

Description

Two related products are available. A daily early voting summary, shown in the results portal, gives accumulated and per-day counts by early voting site. Separately, voter-level files list every person who voted early, both per day and cumulatively, across the 14-day early period. Only the most recent election's voter-level files are kept online; earlier files are removed.

Dedicated webpage

Summary in the results portal ("Early Vote Turnout Summary"); live daily dashboard:

<https://elections.clarkcountynv.gov/ElectionResultsTV/evturnout.aspx>

Voter-level files:

https://www.clarkcountynv.gov/government/departments/elections/reports_data_maps/early-voting-turnout-data

Example (2026 primary, first day):

https://elections.clarkcountynv.gov/VoterRequestsTV/EVMB/ev_20260523.zip (a zip containing one CSV)

Variables

The voter-level early voting file contains:

- + IDNUMBER [Clark County voter record identifier; the same number identifies a voter across the early voting, mail ballot, signature cure, and voter history files]
- + NAME
- + PRECINCT
- + PARTY
- + PARTY ABBR
- + CONGRESS
- + ASSEMBLY

- + SENATE
- + COMMISSION
- + EDUCATION
- + REGENT
- + SCHOOL
- + CITY
- + WARD
- + TOWNSHIP
- + STATUS [A Active, I Inactive, CH Challenged, CP Citizen Pending, AP Active Pending]
- + EV SITE [early voting site name, e.g. "MEADOWS MALL - EV"]
- + ELECTION CODE [two-digit year plus election type, e.g. 24G 2024 general, 24P 2024 primary, 24PP 2024 presidential preference primary, 23S 2023 special]
- + ACTIVITY DATE [date voted]

Notes for use

- + Daily files are unaudited and subject to later correction—an audited cumulative is posted after the election.
- + PARTY and PARTY ABBR are populated only for primaries and read NA in a general election.
- + The election-type suffix is not consistent across years: the 2024 primary is 24P and the 2026 primary is 26PE. The layout PDF's election-code table lists only two codes and is wrong about 2016, so take codes from the download filenames on the index page.

Mail Ballot Data

Description

A voter-level list of everyone who has returned a mail ballot for a given election, updated nightly and cumulative across the election. Coverage runs from the 2022 primary to the present.

Dedicated webpage

Index:

https://www.clarkcountynv.gov/government/departments/elections/reports_data_maps/m-b-data

Example (2024 general):

<https://elections.clarkcountynv.gov/VoterRequestsTV/EVMB/mbreq24G.zip> (a zip containing one CSV)

Variables

- + IDNUMBER [the same Clark voter identifier as the mail ballot and early voting files]
- + VOTER_NAME
- + STREET_NUMBER
- + STREET_PREDIRECTION
- + STREET_NAME
- + STREET_TYPE
- + UNIT
- + CITY
- + STATE
- + ZIP
- + PRECINCT
- + VOTER_REG_PARTY
- + BALLOT_PARTY [party of the ballot issued, partisan primaries only]
- + ELECTION_CODE
- + REQUEST_SOURCE
- + REQUEST_DATE
- + BALLOT_MAIL_DATE
- + BALLOT_RECEIVE_DATE
- + RETURN_CODE [blank if accepted; SNP signature missing; UND undeliverable]

Notes for use

- + IDNUMBER is not unique in the file: the 2024 general carries 451,867 rows for 451,815 voters. Deduplicate before counting voters.

- + A RETURN_CODE of SNP marks a ballot sent to signature curing. The layout PDF also documents UND for post-office undeliverables, but the 2024 general file contains only SNP and blanks.
- + REQUEST_SOURCE and REQUEST_DATE are present in the header but empty in the file.
- + The published layout PDF names the address fields without underscores (STREETNUMBER, STREETPREDIR), but the actual CSV uses the underscored names above.

Signature Cure Data

Description

A live, searchable report of mail ballots flagged for signature curing and their cure status for the current election, with a download of all or filtered records. It populates only during an active curing window.

Dedicated webpage

<https://elections.clarkcountynv.gov/SigCureReporting/>

Variables

- + Election Name
- + ID Number
- + Name
- + Address
- + Receive Date
- + Cured Date
- + Return Status
- + Notice Date
- + Call Date
- + Call Description
- + Emailed Date
- + Emailed Description

Notes for use

- + The report is empty between elections. As of August 2026, the 2026 general had not occurred, so no records were present, and the record-level formats could not be confirmed against data.
- + The on-screen table labels these differently ("ID Number", "Call Description"); the names above are from the downloaded CSV. The report is empty between elections—as of August 2026, the 2026 general had not occurred, so no records were present and the value lists for RETURN STATUS, CALL DESCRIPTION, and EMAILED DESCRIPTION could not be confirmed.

Voter History File

Description

A countywide voter-participation file, generated on demand from the results portal, listing each voter and the method by which they voted in a given election. Participation history reaches back to the 1996 general election.

Dedicated webpage

Results portal (select an election, then "Voter Turnout Data File", then "Generate Voter History File"): <https://elections.clarkcountynv.gov/electionresultsTV/results.aspx>

Variables

- + IDNUMBER [Clark County voter record identifier]
- + VOTER_NAME
- + VOTING_METHOD [ED Election Day, EV Early Vote, MB Mail Ballot]
- + PRECINCT
- + BALLOT_PARTY
- + VOTER_PARTY [registered party at the time of the election]
- + DATE_VOTED
- + ELECTION_CODE [two-digit year plus election type, e.g. 24G 2024 general, 26PE 2026 primary]

Notes for use

- + The file is built on demand rather than posted at a fixed URL, and covers the full electorate. The fields above are from the county's documentation.

Washoe County

Washoe County (which includes Reno) has roughly 15% of Nevada's active voters and runs elections through the [Washoe County Registrar of Voters](#). It publishes the same precinct-by-mode results split as Clark, precinct boundaries the state releases only as a table, and daily voter-level mail, cure, and turnout files.

Statement of Votes Cast

Description

Official results for each contest by precinct and by vote method, as an Excel workbook with one sheet per contest. Within each precinct, four rows—Election Day, Early Voting, Mail, and Total—carry per-candidate votes, registration, and turnout. Coverage runs from 2018 to the present as Excel for both general and primary elections; earlier years are available only as PDF where published at all. In the 2026 primary the mode rows appear only in the unofficial file; the official file carries one row per precinct and adds Undervotes and Overvotes.

Dedicated webpage

Archive index: <https://www.washoecounty.gov/voters/results/archivedresults.php>

Current cycle: <https://www.washoecounty.gov/voters/results/2026data.php>

Example (2024 general):

<https://www.washoecounty.gov/voters/results/resultsfiles/2024generaldata.xlsx>

Variables

The first sheet is a cover page carrying the election name, county, and date. Each of the remaining sheets is one contest, with the contest name in the second row and the

column headers in the fourth. Precinct labels are township-qualified, e.g. "RENO-VERDI 1000". Each contest sheet contains:

- + Precinct
- + Registered Voters
- + one column per candidate, headed "Last, First" with the party in parentheses on partisan contests [DEM, REP, LPN Libertarian Party of Nevada, IAP Independent American Party]. Presidential columns name both candidates on the ticket, e.g. "Harris, Kamala D. and Walz, Tim (DEM)"
- + None of these candidates

Notes for use

- + Each contest sheet ends with a County Total row.
- + Small cells are masked in-cell with "*****" ("Insufficient Turnout to Protect Voter Privacy").
- + The header row is not at a fixed position, blank spacer columns sit between data columns, and the Precinct column and its Election Day / Early Voting / Mail / Total rows are repeated in a second column position, so do not hardcode offsets.
- + The 2026 sheets add Times Cast, Undervotes, and Overvotes columns absent in 2024, and the 2026 primary final file uses a different name and path (<https://www.washoecounty.gov/voters/results/datafiles/WASHOE2026PRIMARYSOVCFINAL.xlsx>); current-cycle files can be found under /results/datafiles/ before being renamed.

Cast Vote Records

Description

Ballot-level cast vote records for Washoe County, published by the county for every statewide election from the 2020 general through the 2026 primary. Each row is one ballot, showing the selection made in every contest on it along with how and where it was cast. These are the same Dominion exports the Secretary of State centralizes for 2026, but the county is the only source for earlier elections.

Dedicated webpage

Archive index: <https://www.washoecounty.gov/voters/results/archivedresults.php>

Current cycle: <https://www.washoecounty.gov/voters/results/2026data.php>

Example (2024 general):

<https://www.washoecounty.gov/voters/results/resultsfiles/2024generalcvr.csv>

Files are linked as "Cast Vote Record" under each election. Earlier years are Excel workbooks (2020generalcvr.xlsx, 2022primarycvr.xlsx, 2024pppcvr.xlsx); later years are CSV files (2022generalcvr.csv, 2024generalcvr.csv).

Variables

The archived files carry the full 16-column Dominion metadata block: the same eight columns listed under the statewide Cast Vote Records above, followed by:

- + ImagePath [server path to the ballot image, encoding tabulator, batch, and record number]
- + SessionType [e.g. ScannedVote]
- + VoterFlag
- + Modified
- + CardInfo
- + PdfName [ballot style name, e.g. "BTWASH_PRI_REP_STY0043_MAIL - 6114001.pdf"]
- + UniqueVotingIdentifier
- + VotingSessionIdentifier

Contest and candidate names occupy the second and third header rows; the fourth row holds these field names followed by a party code per candidate column.

Notes for use

- + The file linked as the 2024 primary cast vote record is the 2022 general file: 2024primarycvr.csv and 2022generalcvr.csv are byte-identical, both 157,918,995 bytes, and both open with "WAS General 20221108". Washoe's 2024 primary records are effectively unpublished.

- + The Dominion version moves across elections (5.12.5.39 in 2022, 5.17.17.1 in the 2024 general, 5.20.2.6 in 2026), and contest header formatting moves with it, so one parser will not read every year.
- + The county's 2026 file carries eight metadata columns where the Secretary of State's copy of the same election carries sixteen. Check the header rather than the source.
- + ImprintedId is empty throughout. Numeric fields are written Excel-armored as "1".

Daily, Mail, Cure, and Turnout Files

Description

During an election, Washoe posts daily cumulative voter-level files: a mail-ballot tracking file with one row per mail ballot issued or returned, a signature-cure file with one row per ballot needing cure, and an in-person turnout file with one row per early or Election Day voter. These are posted for the current cycle and archived by year.

Dedicated webpage

Current cycle: <https://www.washoecounty.gov/voters/results/2026data.php> (cure file short link: [washoecounty.gov/ballotcure](https://www.washoecounty.gov/ballotcure))

Filenames vary by day; look for names ending Mail, Cure, and In-Person under the current-cycle page.

Variables

Mail ballot file:

- + VOTER_ID [Washoe County voter identifier; the same value across the mail, cure, and in-person files]
- + FULL_NAME
- + VOTER_REG_PARTY
- + PRECINCT
- + UOCAVA [YES or NO; YES marks a military or overseas voter]
- + BALLOT_ID

- + BALLOT_STATUS [Mailed, Accepted, Surrendered and Voted in Person, Returned Undeliverable, Canceled, Signature Cure Needed, Returned, or Contact County Clerk]
- + BALLOT_STATUS_REASON [free-text reason, e.g. MANUAL SIG VER, AUTO SIG VER, VOTED IN PERSON, UNDELIVERABLE, SIGNATURE DOES NOT MATCH, DECEASED; blank on ballots not yet returned]
- + BALLOT_MAIL_DATE
- + BALLOT_RETURNED_DATE
- + BALLOT_RETURNED_METHOD [Mail, Drop Box, In Person, Email, Return, or None; ballots returned through EASE, Nevada's Effective Absentee System for Elections, read EASE Military Overseas, EASE Military Domestic, EASE Overseas Citizen, or EASE ADA. Blank until the ballot is returned]
- + MAIL_RETURNED_LOCATION

In-person turnout file:

- + COUNTY
- + VOTER_ID
- + FULL_NAME
- + VOTER_REG_PARTY
- + PRECINCT
- + DATE_VOTED
- + VOTE_LOCATION [voting site name with a mode suffix, "- EV" early voting or "- ED" Election Day, e.g. "SOUTH VALLEYS LIBRARY - EV"]

The cure file carries the same voter and ballot identifiers as the mail file plus PHONE and full residential and mailing address fields.

Notes for use

- + Each dated file is a fresh cumulative snapshot, and filenames are unstable across a cycle, so take the latest or the one marked Final.

Precinct Boundaries

Description

Voter-precinct boundary polygons on Washoe's Open Data portal, each attributed with the districts it falls within. The layer holds 472 precincts and is current to the 2026

cycle. These are the precinct geographies the state publishes only as a tabular crosswalk.

Dedicated webpage

Dataset:

https://opendata.washoecounty.gov/datasets/d75454ff088945958549f8be2206c4f8_7

Service layer:

<https://wcgisweb.washoecounty.us/arcgis/rest/services/OpenData/OpenData/FeatureServer/7>

Available as Shapefile, GeoJSON, CSV, and KML.

Variables

- + OBJECTID
- + PRECINCT [numeric]
- + SENATE [state senate district]
- + ASSEMBLY [state assembly district]
- + BOARDOFEDU [state board of education district]
- + REGENTS [Board of Regents district]
- + COMMISSION [county commission district]
- + RWARDS [Reno city ward]
- + SWARDS [Sparks city ward]
- + STDTRUST [school-trustee district elected by district, A through E]
- + GENTRUST [at-large school-trustee district, F or G]
- + GID [general improvement district]
- + TOWNSHIP
- + DSMAPBOOK [map-book page]
- + PREPARER [username of the county GIS staffer who last edited the record; pairs with DATE_MOD]
- + DATE_MOD [last edit date]
- + MP [undocumented; "NO" on every precinct]
- + FPD [fire protection district]
- + PREC_TXT [precinct number as text]
- + POLLINGPLACE

- + Shape__Area
- + GlobalID [Esri-assigned GUID for the row; OBJECTID is the layer's sequential row number]

Notes for use

- + PRECINCT is stored as a number; PREC_TXT carries the same value as text. MP is "NO" on every precinct and has no published definition. POLLINGPLACE is empty on all 472 records. Companion layers on the same portal carry ward, township, commission, and improvement-district boundaries.
