

New York Election Data Guide

Last updated: October 15, 2026

New York publishes statewide election data through the [State Board of Elections \(SBOE\)](#): certified results back to 1994 through a searchable database with CSV export, semiannual voter enrollment counts at five geographies, campaign finance filings, and the statewide voter file by request. The state certifies and publishes results at the county level only; election-district (ED) results, the New York equivalent of precinct results, live with the county boards of elections—one per county outside of New York City, and a single city board covering the five boroughs. Historically, ED-level returns have been inconsistently provided by these boards. However, in 2026, [Election Law § 3-112](#) created the [Dr. John L. Flateau Voting and Elections Database \(VEDA\)](#), which requires every election authority to transmit certified ED-level results, including a vote-mode breakdown, to the state for publication. As of September 2026, VEDA includes only 2026 school district, library, and village elections; county board elections should appear after the November 2026 general election.

Two access constraints are worth noting for the statewide data. The SBOE's websites, including the results database and VEDA, sit behind a security service that blocks automated download tools, so their pages and files usually have to be pulled through a web browser rather than a script. The one exception is the results database's CSV export endpoints, which do serve scripts. Additionally, the statewide voter file can be obtained by written request.

The three county sections cover the boards serving the state's largest populations: the Board of Elections in the City of New York (the five boroughs, 40% of the state's registered voters), Suffolk County, and Nassau County. New York City publishes ED-level results and ranked-choice cast vote records; Suffolk publishes ED-level detail through a vendor platform since 2025; Nassau publishes a summary results page and election district shapefiles.

Statewide

Election Results

Description

Certified results for every state-run contest and ballot question from 1994 through 2025, at the county level, in a searchable database the SBOE launched as its archive of record. The database covers 5,426 contests and 42 ballot questions as of September 2026, each backed by scans of the official source documents. Every contest page offers a CSV download in two layouts, and any search can be exported as one CSV, so the full 1994–2025 series can be pulled in a single file. Results for the current cycle are posted separately on the SBOE's results page as a certified Excel workbook per election, one worksheet per contest, with counties as rows.

Dedicated webpage

Results index: <https://elections.ny.gov/election-results>

Archive database, 1994–2025: <https://results.elections.ny.gov/>

Example contest page: <https://results.elections.ny.gov/contest/5859>

Variables

The list-layout CSV is one row per candidate per party line per county with the following variables:

- + contest_id
- + election_id
- + election_date
- + election_type [General, Primary, Special]
- + primary_party [party holding the primary; blank otherwise]
- + question_text [ballot question wording]
- + question_type [ballot question category, e.g. Amendment or State Proposition; see notes below]
- + office_id
- + office_name
- + office_modifier [Male or Female, for State Committee races only]

- + district_id
- + district_type [e.g. State Assembly District]
- + district_name [district number]
- + candidate_id
- + candidate_name
- + retention_candidate_id
- + retention_candidate_name
- + division_id
- + division_type [geography of the row; County in the files checked]
- + division_name [county name]
- + vote_channel [empty in the files checked]
- + is_winner
- + number_seats
- + candidate_party_id
- + candidate_party_name [ballot line; one row per line for fused candidates]
- + votes

The table-layout CSV is a crosstab: two header rows (candidate, then party line), one row per county plus a district total row, with Scattering, Blank, Void, and Total Votes columns. The certified workbooks carry the same shape per worksheet: county rows, one column per candidate per ballot line, then Blank, Void, Scattering, and total columns.

Notes for use

- + The question_type field is inconsistent: most ballot questions carry a category (Amendment or State Proposition), but one question—Proposition 1, the November 2024 equal-protection amendment—has its full title there instead, across all 310 of its rows; do not rely on it alone to filter by category.
- + Fusion voting means a candidate's total is the sum across their ballot lines. In the list CSV, sum votes over candidate_name within a contest and division. The database collapses a candidate's fifth and later parties into a single Other Parties line.
- + The CSV endpoints are at ny.elstats.civera.com and serve scripted downloads; requests redirect once, so a downloader must follow redirects. The database's own pages require a browser.

- + A whole search exports as one CSV in the list layout. Exporting the full 1994–2025 year range yields about 109,000 rows.
- + The results index also links ballot certifications (PDF lists of the candidates certified to appear on the ballot for each election back to 2011) at <https://elections.ny.gov/certifications>.

Voting and Elections Database (VEDA)

Description

The Dr. John L. Flateau Voting and Elections Database, mandated by [Election Law § 3-112](#). Every election authority in the state—county boards plus roughly 400 school districts, public libraries, and villages that run their own elections—must transmit certified election-district-level results, poll site lists, voter participation counts by voting method, and tabulations of invalid affidavit and absentee ballots; the portal publishes them within 60 days of submission. As of September 2026, coverage includes 2026 school district, library, and village elections only (about 430). County board elections, which the statute also requires, are expected to be added after the November 2026 general is certified. Data exports as CSV or JSON, per election.

Dedicated webpage

Portal: <https://flateau.elections.ny.gov/>

Downloads: <https://flateau.elections.ny.gov/downloads>

Variables

Election Results export:

- + Election Name
- + Contest Jurisdiction
- + Contest Type [Budget, Proposition, Elective Office]
- + Office
- + District Type [School or Library; blank for elsewhere]
- + District
- + Candidate
- + Party

- + Election Day Votes
- + Early Votes
- + Votes by Mail
- + Affidavit Votes
- + Vote Total

Poll Site Data export:

- + Election Name
- + Ward
- + Precinct
- + Poll Site Name
- + Address 1
- + Address 2
- + City
- + State
- + ZIP
- + Designation [Election Day or Early Voting]

Voter Statistics export:

- + Election Name
- + Voting Method
- + Voter Count

Invalid Affidavits export:

- + Election Name
- + Election District Combined Into [meant to record which ED absorbed a merged ED's affidavits; [populated inconsistently, see notes]
- + Not Registered
- + Moved Within State
- + Wrong Polling Place
- + Signature Issue
- + Already Voted
- + Previous Absent/Early Mail Ballot
- + Incomplete Affidavit
- + Party Enrollment Issue
- + Other
- + Total Invalid

Notes for use

- + Exports are one election at a time, selected by the full election name string exactly as the portal lists it.
- + The export API sits behind the same browser gate as the rest of elections.ny.gov, so exports have to come through a browser session.
- + County board non-compliance reports are due twice yearly under the statute; the portal shows none due before January 1, 2027.
- + The field Election District Combined Into in the Invalid Affidavits export is sparsely and inconsistently populated: blank in most rows, 0 or 1 in a few, and in five rows a jurisdiction name (e.g. "Prattsburgh Central School") rather than an ED identifier.

Voter Enrollment Statistics

Description

The NYSVoter system provides registered voter counts by party enrollment and status (active, inactive, total), published twice a year—a late-February snapshot and a November 1 snapshot—at five geographies, each on its own index page: county, congressional district, state senate district, assembly district, and election district. The county series reaches back to 1994, the election-district series to 2008. District files report each county's portion of the district separately; election-district files come one per county per snapshot.

Dedicated webpage

By county: <https://elections.ny.gov/enrollment-county>

By congressional district: <https://elections.ny.gov/enrollment-congressional-district>

By senate district: <https://elections.ny.gov/enrollment-senate-district>

By assembly district: <https://elections.ny.gov/enrollment-assembly-district>

By election district: <https://elections.ny.gov/enrollment-election-district>

Variables

The county file as of February 20, 2026:

- + REGION [Outside NYC, or the NYC region]
- + COUNTY
- + STATUS [Active, Inactive, or Total]
- + DEM [Democratic]
- + REP [Republican]
- + CON [Conservative]
- + WOR [Working Families]
- + OTH [other parties]
- + BLANK [no party enrollment]
- + TOTAL

Note: Election-district files drop REGION and lead with COUNTY and ELECTION DIST [county name plus a six-digit code]; congressional, senate, and assembly district files lead with DISTRICT and COUNTY. The party columns are identical across geographies within a snapshot.

Notes for use

- + Party columns reflect which parties were officially recognized in New York at the time, so the layout changes over time. The November 2019 files carry DEM, REP, CON, WOR, GRE [Green], LBT [Libertarian], IND [Independence], SAM, OTH, BLANK, TOTAL; the parties that lost qualification in 2020 fold into OTH in later snapshots. Check the header of each vintage before stacking years.
- + Snapshots from November 2019 onward are Excel (xlsx); earlier snapshots are PDFs.
- + Every geography row appears three times, once per STATUS value, and Total rows are the sum of Active and Inactive. Filter on STATUS before aggregating.
- + Files are reached through paginated, year-specific index pages rather than a constructable URL pattern; county snapshot URLs encode the date (voters-registered-county-MMDDYYYY) but older ones drop the leading zero on single-digit months and days (2/21/2022 is voters-registered-county-2212022, not -02212022).

Statewide Voter Registration List (NYSVoter)

Description

The statewide voter file, maintained jointly by the SBOE and the county boards. It is not posted for download; it can be obtained by a Freedom of Information Law (FOIL) request through the SBOE's request portal, with a required statement that the data will be used for an elections purpose under [Election Law § 3-103\(5\)](#). The Board notes that “elections purpose” has traditionally been interpreted broadly and includes academic research, along with campaigning, voter outreach, and fundraising. The file is delivered zipped, in ASCII comma-delimited format, with a file layout document; the statewide file runs to millions of records. The SBOE’s FOIL page lists no separate charge for the voter file.

Dedicated webpage

FOIL request page: <https://elections.ny.gov/freedom-information-law-foil-requests>

Variables

Not enumerated here: the file is available only by request and was not obtained for this guide. The SBOE provides the field layout with the file.

Notes for use

- + Using information from voter registration records for non-election purposes is prohibited by [Election Law § 3-103\(5\)](#); the request must state an elections purpose.
- + Requests go through the SBOE's online FOIL portal (GovQA). County boards separately fill requests for their own counties' lists.

Campaign Finance Disclosures

Description

The SBOE publishes campaign finance filings through a search interface on its public reporting site and as bulk datasets on the state open data portal (data.ny.gov). The bulk

datasets cover itemized contributions and expenditures from disclosure reports beginning in 1999, all disclosure report data beginning in 1999, and filer, committee, and candidate registration data beginning in 1974. They are updated on an ongoing basis and are downloadable in full or queryable through the portal's API.

Dedicated webpage

Search interface: <https://publicreporting.elections.ny.gov/>

Contributions, beginning 1999: <https://data.ny.gov/d/4j2b-6a2j>

Expenditures, beginning 1999: <https://data.ny.gov/d/ajsb-8pni>

Disclosure reports, beginning 1999: <https://data.ny.gov/d/e9ss-239a>

Filer data, beginning 1974: <https://data.ny.gov/d/7x2g-h32p>

Variables

The contributions and expenditures datasets share one 45-field layout; the schedule fields determine which fields are populated for a given row. The variables as of September 2026 are:

- + filer_id
- + filer_previous_id
- + cand_comm_name [candidate or committee name]
- + election_year
- + election_type
- + county_desc [county of the office sought]
- + filing_abbrev
- + filing_desc [filing period, e.g. 32-Day Pre-Primary]
- + r_amend [amendment flag]
- + filing_cat_desc
- + filing_sched_abbrev
- + filing_sched_desc [disclosure schedule the row comes from]
- + loan_lib_number
- + trans_number [transaction number]
- + trans_mapping
- + sched_date [transaction date]
- + org_date
- + cntrbr_type_desc [contributor type]

- + cntrbn_type_desc [contribution type]
- + transfer_type_desc
- + receipt_type_desc
- + receipt_code_desc
- + purpose_code_desc [expenditure purpose]
- + r_subcontractor [subcontractor flag]
- + flng_ent_name [contributor or payee name]
- + flng_ent_first_name
- + flng_ent_middle_name
- + flng_ent_last_name
- + flng_ent_add1 [street address]
- + flng_ent_city
- + flng_ent_state
- + flng_ent_zip
- + flng_ent_country
- + payment_type_desc
- + pay_number [check or reference number]
- + owed_amt
- + org_amt [amount]
- + loan_other_desc
- + trans_explntn [transaction explanation]
- + r_itemized
- + r_liability
- + election_year_r
- + office_desc [office sought]
- + district
- + dist_off_cand_bal_prop [district, office, candidate, or ballot proposal identifier]

Notes for use

- + The data.ny.gov datasets serve scripted downloads and API queries without gating; the SBOE search site requires a browser.
- + New York City candidates for city offices also file with the separate New York City Campaign Finance Board; those filings are not in the SBOE datasets.

Redistricting Data (LATFOR)

Description

The Legislative Task Force on Demographic Research and Reapportionment (LATFOR) publishes the state's redistricting datasets: 2020-cycle files merging census population with statewide election results and voter enrollment, at five levels of geography (state, county, minor civil division, voting tabulation district, and census block), plus a companion set for primary elections and a 2018 election district to 2020 voting tabulation district (VTD) equivalency file. These are the standard files for putting New York election results onto census geography—the state election authority publishes no statewide election-district boundary files.

Dedicated webpage

Data index: <https://latfor.state.ny.us/data/>

Example file (VTD-level general election data):

https://latfor.state.ny.us/data/2020vote/2020vote_vtd.xlsx

Technical documentation: https://latfor.state.ny.us/data/2020vote/2020vote_doc.pdf

Variables

The VTD general-election file opens with identifier columns, then repeating vote-count blocks per contest:

- + STATE [FIPS code, 36]
- + COUNTY [three-digit FIPS]
- + VTD18
- + VTDID [state + county + VTD]
- + NOPAD_VTDID [same, without zero-padding]
- + TOT, DEM, REP, CON, IND, WF, OTH, BLANK [blocks suffixed with an election-contest code, e.g. TOT16G1 [total votes, 2016 general, contest 1]]

Notes for use

- + The technical documentation defines each code included in the list of variables.
- + Files are Excel; the VTD file is about 16 MB and the block file is larger. The host serves scripted downloads.

- + The party-suffixed columns are ballot lines, not fused candidate totals; combine lines per the technical documentation when a candidate ran on more than one.
- + The equivalency file ([2020 equiv.xlsx](#)) is the crosswalk between the 2018 election districts used in older data and 2020 census VTDs.

New York City

The Board of Elections in the City of New York (NYC BOE) administers elections in all five boroughs—Bronx, Kings (Brooklyn), New York (Manhattan), Queens, and Richmond (Staten Island) counties—and publishes machine-readable election-district results and cast vote records.

Certified Election Results by Election District

Description

Certified results for every contest in city-administered elections, published as one CSV and PDF pair per contest per election. CSVs run from 2014 through 2026; 1999 through 2013 are PDF-only Statement and Return reports. Each contest comes in two forms: an ED Level file (one row per election district per reporting unit) and a Recap report (assembly-district-level certification totals). The ED Level CSV is the analysis file. Its rows carry either a ballot-accounting counter (Public Counter, Absentee / Military, Federal, Affidavit, Manually Counted Emergency, and in presidential years Special Presidential), a vote line (candidate and party), or Scattered [write-ins].

Dedicated webpage

Results index, current year: <https://vote.nyc/page/election-results-summary>
Prior years, 2005–2025: <https://vote.nyc/page/election-results-summary-YYYY>; 1999–2004 share one page ([election-results-summary-2004-1999](#))

Variables

The ED Level CSV as of the February 2026 special election:

- + AD [assembly district]
- + ED [election district within the AD]

- + County [borough county name]
- + EDAD Status [IN-PLAY, or COMBINED INTO another ED]
- + Event [election name and date]
- + Party/Independent Body [populated in primaries; blank otherwise]
- + Office/Position Title
- + District Key [district number, or NYC for citywide contests]
- + VoteFor [seats to elect]
- + Unit Name [counter, candidate with party, or Scattered]
- + Tally

Notes for use

- + From 2018 onward, the CSVs have no separate header row: every data row repeats all 11 column names as its first 11 fields, so each row is 22 fields and the values are fields 12 through 22. Files from 2014 through 2017 are conventional.
- + EDs marked COMBINED INTO report zeros; their votes appear in the target ED. Keep the combined rows for geography, not for counting.
- + There is no early-voting counter in any year (early voting began in 2019 in New York); early votes are folded into the machine counts. The mode detail that exists is in the counters listed above, whose names changed over time (Emergency became Manually Counted Emergency in 2018).
- + Fusion lines are separate rows; sum across parties within candidate for totals.
- + Ranked-choice contests get no ED Level or Recap files at all; their ED-level first choices must be computed from the cast vote records (next section).
- + The Recap CSVs are print-layout exports of the certification document, not tidy tables; use them for checking, not parsing.
- + URL paths vary by era (downloads/csv vs pdf directories, inconsistent folder naming for specials). Scraping this data requires using the year index pages rather than constructing file URLs.
- + The board's election night reporting site (enr.boenyc.gov) exists only while a canvass is running; between elections it redirects to vote.nyc, and no bulk endpoint is available.

Ranked-Choice Voting Cast Vote Records

Description

Ballot-level cast vote records (CVRs) for ranked-choice voting (RCV) elections, which New York City has used in primaries and specials for city offices since 2021. One ZIP is provided per election: the 2021, 2023, and 2025 primaries, the April 2026 special (26th Congressional District contest area), and the June 2026 primary. Each ZIP holds Excel files split by borough and voting mode, plus a lookup file mapping candidacy IDs to names. Certified round-by-round elimination tables are published separately per contest as HTML and PDF.

Dedicated webpage

Each cycle's results-summary page (see previous section) carries a "Cast Vote Record (CVR)" download link near the top when that cycle had an RCV contest; there is no separate CVR index.

Example ZIP (2023 primary):

https://vote.nyc/sites/default/files/pdf/election_results/2023/20230627Primary%20Election/cvr/2023P_CVR_Final.zip

Example round-by-round table (2025 primary):

https://vote.nyc/sites/default/files/pdf/election_results/2025/20250624Primary%20Election/rcv/026918_1.html

Variables

One row per ballot:

- + Cast Vote Record [ballot serial number]
- + Precinct [assembly district and election district, e.g. AD: 75 ED: 039]
- + Ballot Style [2021 files only]
- + One column per contest per rank, named by party, office, choice number, and district; cell values are a numeric candidacy ID, undervote, or overvote

The lookup file in each ZIP has two fields:

- + CandidacyID
- + DefaultBallotName

Notes for use

- + File naming and mode codes vary by year: files follow {year}P{borough 1-5}V1_{mode}.xlsx, where the mode set was ABS/AFF/ELE/EMG/OTH in 2021, ELE/EAR/OTH in 2023, and ABS/AFF/EAR/ELE/EMG/OTH in 2025; the 2026 special instead uses ABS/AFF/ED/EV. Early voting is separable from election day only where an EAR or EV file exists (2023 onward).
- + The workbooks carry wrong dimension metadata that makes openpyxl read a single cell; call `reset_dimensions()` on each worksheet (or use a reader that ignores declared dimensions).
- + The 2021 ZIP is about 109 MB and the 2025 ZIP about 90 MB; borough files for big elections are split into numbered parts.
- + The 2026 primary ZIP covers only that cycle's single RCV contest, not the whole primary.

Voter Enrollment

Description

The city board adds two geographies to the state's enrollment publications: enrollment by City Council district and by Municipal Court district, by party and status, published roughly annually from 2011 through 2025 as PDFs. It also rehosts the state's county-level file. Assembly-district and election-district enrollment for the city comes from the state's publications (see Statewide).

Dedicated webpage

Index: <https://vote.nyc/page/voter-enrollment-totals>

Variables

Printed PDF columns, as of the February 2025 Council report:

- + Democrat
- + Republican
- + Conservative
- + Working Family
- + Other

- + Blank
- + Total each for active and inactive voters by district.

Notes for use

- + Each variable is aggregated by active, inactive, and total voters by district.
- + PDF only; extraction requires table parsing.
- + File paths moved between directories over the years; work from the index page.

Poll Sites and District Boundaries

Description

Poll site locations and the ED-to-site assignment are on NYC Open Data, attributed to the board: a poll site list with accessibility and building identifiers, and an election district-to-poll site crosswalk. Both were last updated in October 2018. Current poll site lookup is an address-based app only. Election district boundary shapefiles for the city are published by the Department of City Planning on NYC Open Data and its BYTES of the BIG APPLE series, updated each redistricting; vote.nyc itself posts only PDF maps of assembly, congressional, council, and municipal court districts.

Dedicated webpage

Poll sites: <https://data.cityofnewyork.us/City-Government/Voting-Poll-Sites/mifw-tguq>

ED to poll site crosswalk: <https://data.cityofnewyork.us/City-Government/Election-District-Poll-Sites/i3a3-qxkf>

District map PDFs: <https://vote.nyc/page/nyc-district-maps>

Variables

Poll sites:

- + borough
- + site_status
- + site_name
- + site_number
- + street_number
- + street_name

- + zip_code
- + city
- + voter_entrance
- + handicap_entrance
- + community_board
- + council_district
- + census_tract
- + bin [building identification number]
- + bbl [borough-block-lot]
- + nta [neighborhood tabulation area]

ED to poll site crosswalk:

- + borough [1-5]
- + site_number
- + ad [assembly district]
- + ed [election district]

Notes for use

- + Both Open Data tables are stale (October 2018); poll sites and ED assignments have changed since.
- + For current ED boundaries use City Planning's Election Districts dataset on NYC Open Data, which is maintained.

Suffolk County

Suffolk publishes certified results as county-portion contest totals back to 2002, and since March 2025 has run its detailed and election night results through the vendor platform Enhanced Voting, which provides ED-level results with a vote-mode split. Election district boundaries and poll sites are on the county's GIS open data portal. The county publishes no enrollment data of its own.

Certified Election Results Archive

Description

Certified results for every county-run election from 2002 through 2026: generals, primaries, presidential and federal primaries, specials, and sewer district elections. Each election is a set of static HTML pages, one per office group, presenting candidate totals for the county portion of each contest. This is the only certified series the county publishes, and it is county totals only.

Dedicated webpage

Index: <https://www.suffolkcountyny.gov/Departments/BOE/Election-Results>

Example (November 2025 general):

<https://apps2.suffolkcountyny.gov/boe/eleres/25ge/default.htm>; the pattern is {yy}{code} with codes ge [general], pe [primary], pr [presidential primary], pf [federal primary], s1/s2/s3 [specials], sd [sewer district]

Variables

Printed columns per contest:

- + Candidate
- + Party
- + Votes
- + Share.

Notes for use

- + The pages are HTML, and results live in per-office pages linked from an offices menu, not in the entry page itself. The layout is uniform from 2002 through 2026, so one scraper covers the whole series.
- + Contest headers carry the seat to elect, the number of election districts reporting, and votes cast of eligible.
- + Fusion candidates get one row per ballot line plus a Total row.
- + Contests crossing county lines are flagged “Suffolk County Portion Only”.

Detailed Results and Election Night Reporting

Description

Since March 2025, Suffolk reports elections using Enhanced Voting's public results platform. For the November 2025 general and June 2026 primary, it publishes downloadable Excel and PDF reports, including election-district results broken out by voting method (Election Day, Early Voting, Absentee/EVBM, Affidavit); a JSON API behind the site also serves per-ED turnout. Everything on the platform is flagged unofficial election-night data; certified figures live only in the archive above.

Dedicated webpage

Results site: <https://app.enhancedvoting.com/results/public/suffolk-county-ny>

Example turnout API call:

<https://app.enhancedvoting.com/results/public/api/elections/suffolk-county-ny/GE25/turnout>

Variables

Precinct/District Results by Contest Table Excel, sheet Results:

- + Contest
- + Votes Allowed [seats to elect]
- + Precinct [town name plus ED number]
- + Candidate
- + Party
- + Votes Cast

All Results Excel, four sheets:

- + Summary Results: Office Name, Contest ID, Ballot Name, Choice ID, Party, Total
- + Summary Results by Group: the same plus Group [voting method]
- + Election District Results: Election District, Office Name, Contest ID, Ballot Name, Choice ID, Party, Total
- + Election District Results by Group: the same plus Group—the most granular file published, election district by contest by ballot line by voting method

Turnout API, one record per ED:

- + id

- + precinctName
- + ballotsCast
- + voterTurnout
- + voterRegistration

Notes for use

- + Coverage starts with a March 2025 town special; downloadable report files exist for the November 2025 general and June 2026 primary only. Nothing before 2025 has ED-level detail anywhere.
- + Candidate rows include Write-in, Under Votes, Over Votes, Total Votes Cast, and Total Registered Voters. The registration rows and the API's voterRegistration field are always zero as of September 2026.
- + Precinct strings carry a trailing space (e.g., “Babylon 1 ”) and use town names, while the county GIS layer keys EDs as a numeric town-prefix code; joining the two requires parsing.

Election District GIS Data

Description

The county GIS office publishes election district polygons (1,070 districts, current vintage), polling place points, and an election district to polling place crosswalk on an ArcGIS Hub open data portal. Each layer downloads as CSV, GeoJSON, shapefile, KML, or file geodatabase, and is queryable as a feature service. Boundary history is not kept; only the current districts are available.

Dedicated webpage

Board of Elections data page: <https://opendata.suffolkcountyny.gov/pages/board-of-elections>

Example (election districts):

<https://opendata.suffolkcountyny.gov/datasets/SuffolkGIS::election-district>

Variables

Election district polygons:

- + OBJECTID
- + PRECINCTID [town-prefix digit(s) plus ED number, e.g. 1235 is Brookhaven ED 235]
- + NAME
- + MUNICIPALITY
- + COUNTY
- + LASTUPDATE
- + CD [congressional district]
- + SD [state senate district]
- + AD [assembly district]
- + LD [county legislative district]
- + TD [town council district]
- + POLLINGID
- + Shape__Area
- + Shape__Length

The crosswalk layer carries OBJECTID, POLLINGID, PRECINCTID, LASTUPDATE; the polling place layer carries the site name, address, hours, accessibility, and contact fields.

Notes for use

- + The Hub pages show a stale modified date; the layers themselves are current (the ED layer matches the 1,070 districts on Enhanced Voting's public results platform and was edited in 2026). Check the feature service's edit date, not the page label.
- + POLLINGID is a zero-padded string in the crosswalk but an integer in the ED layer; normalize before joining.

Nassau County

Most Nassau County election data is not publicly available. It published one unofficial countywide summary page that is overwritten each election, and its only machine-readable dataset is a set of election district shapefiles. It does not publish enrollment, absentee, turnout, or certified results. Most of what is available lies elsewhere: district

and county-level results for federal and state contests are in [LATFOR files](#), and county and town contest records can be requested for view or purchase [from the county Board of Elections](#).

Election Results

Description

A single page of fixed-width text titled Summary Report / Unofficial Results, showing countywide candidate totals by ballot line for the current election, with a statistics block (precincts counted, ballots cast, and in primaries ballots cast by party). The page is overwritten each cycle, so it covers one election at a time. The address has held results since late 2019, and the Internet Archive's Wayback Machine snapshots of it are the only public history.

Dedicated webpage

Index: <https://www.nassaucountyny.gov/571/Election-Results>

The results file itself: <https://app.nassaucountyny.gov/BOE/results/election2.html>

Variables

Not a tabular file. Per contest, the text block prints candidate rows by ballot line with VOTES and PERCENT, and in general elections, a fusion-consolidated Totals by Candidate block.

Notes for use

- + County totals only, no election-district or vote-mode detail, and the REGISTERED VOTERS figure in the statistics block is always zero.
- + The page stays labeled Unofficial even after the canvass; Nassau posts no certified results document.
- + For past elections, query the Wayback Machine for the results URL; snapshots run from December 2019.

Election District Shapefiles

Description

Election district boundaries, published as twenty ZIP archives on the county site, one per town or city and assembly district combination, under the label Voting Precinct Maps. Despite the label, each ZIP is an Esri shapefile. Current vintage only; no boundary history.

Dedicated webpage

Index: <https://www.nassaucountyny.gov/5543/Voting-Precinct-Maps>

Example (Glen Cove, Assembly District 13):

<https://www.nassaucountyny.gov/DocumentCenter/View/52773/GC-13>

Variables

- + ID [feature id]
- + AREA
- + TADED [town or city digit, two-digit assembly district, three-digit election district; 113016 is Glen Cove, AD 13, ED 016]

Notes for use

- + The county GIS server and the county open data portal carry no election layers; these ZIPs are the only boundary source.
- + The county's candidate list and elected officials list are posted as PDFs in the same document center; everything else is a records request.
